

▶▶▶ LOW DOSE CTA TRAINING ◀◀◀

LOW DOSE Level 2

Our program specializes in training using radiation dose saving techniques

All our live case acquisitions are done using the latest techniques to minimize radiation dose. Learning low dose cardiac CT is essential as there is increasing scrutiny on radiation dose delivered to patients.

**We have expertise in doing CT acquisition at less than 10 mSv
Our actual average effective radiation dose is 6 mSv**

LEARN:

- ▶▶ Prospective imaging techniques
- ▶▶ How to adjust your kVp to minimize dose
- ▶▶ How to minimize the amount of tissue radiated (Z-axis)
- ▶▶ To use dose modulation when retrospective is required
- ▶▶ How 85% of our cases are done prospectively
